

Programme in the application of BS7909 to temporary power systems

Course duration: 3 days

This course is aimed at experienced electricians or technicians working with temporary power in theatres, events, broadcasting or film, who have an understanding of basic electrical fundamentals and theories, such as using OHMS Law and working out power loading.

The course is in-person and delivered in a modular format with a range

of written theory assessments, plus practicals.

The assessments consist of a mix of short written questions/answers and multiple-choice questions. There is also an individual practical assessment, closed book, where candidates will demonstrate to the assessor their skills of observation of electrical inspection and demonstrate testing of electrical systems using equipment supplied by the tutor.
